Products and Services

MILLENSYS presents a wide range of software products and solutions for healthcare and business IT

sectors. the following is a brief description of our products:

For Healthcare sector

MiClinic | Electronic Health Record

MiClinic is a professional workflow and productivity improvement application for any polyclinic or medical practice, it can be considered as an enterprise practice management system as well as an EMR / EHR solution. MiClinic handles patients scheduling, admittance, billing, examination procedures and results, prescriptions, reporting, accounting and material management as well as a full back-office financial management including financial reports, general ledger, account receivables, account payables, supply chain management and human resource management

Vision Tools Workspace VNA | Vendor Neutral Archiving System

it is a powerful web based vendor neutral archive solution " VNA ", including built in PACS and reporting capabilities at the same time , the VNA can work in cloud, web, on-premises and enterprise environment using a state of the art ,truly web based, zero footprint universal viewer developed with the latest HTML5 and streaming technology to speed up images, videos and data transmission over low bandwidth lines. The solution includes complete packages for archiving, data manipulation, image diagnosis, printing, reporting, study sharing and image / report distribution between users inside or outside the hospital

MiERP | ERP and Financial Management

MiERP is a web based modular software solution for enterprise business management and automation of customer related processes in any business that allows variety of companies of all sizes to manage their entire business organizations and daily operations, including financials, supply chain, procurement, human resources, sales and marketing , customer support , ...etc

MiERP-HR | Human Capital Management

it is a powerful web based human capital management application that maximizes the workforce productivity and minimizes employee turnover. Human Resources professionals manage the human capital of an organization and focus on implementing policies and processes. They can be specialists focusing in on recruiting, training, employee relations or benefits. Recruiting specialists are in charge of finding and hiring top talent. Training and development professionals ensure that employees are trained and have continuous development. Developing compensation structures, family leave programs, discounts and other benefits that employees can get. MiAnalytics | Business Intelligence Application

MiAnalytics | Business Intelligence Application

MILLENSYS Analytics is a web based business intelligence software that allows users to create dashboards, visual analyses and reports using data from multiple sources. from anywhere and at any time you can access your data, it doesn't matter if you are using a PC, notebook, tablet, IPAD or any smart phone. The software can run on company server (on-premise) or in cloud. This makes it easy to install and maintain.

MILLENSYS Health Wallet | Mobile Applications

MILLENSYS Health Wallet is a smart tool to keep patients engaged with their health care service providers, in which, the patient can schedule new visits or exams , track his/her appointments and keep track of his medical record at the facility.

The patient can view his reports and images from this application as well as more clinical information on his case.

Telemedicine Solution

based on MILLENSYS EHR , the telemedicine solution represents a way for patients to get consultations and treatment from remote doctors , easy to be implemented in rural areas where limited number of consultants or specialties are available.

MiRIS | Radiology Information System

MiRIS is a professional workflow and productivity improvement application for any radiology department. MiRIS handles patients scheduling, admittance, billing, accounting and inventory management. MiRIS is including a built in reporting "MiReport" software to help write reports in the most professional way. With MiRIS as a web application, you ease installation, support in the enterprise environment and boost connectivity with any other systems (PACS/HIS).

Vision Tools Workspace | Web PACS and Reporting Solution

Vision Tools Workspace is a "state of the art" all-in-one solution for all users in the healthcare sector. it is a powerful web based PACS and reporting solution for cloud, web, in-door and enterprise environment. using a state of the art HTML-5 and streaming technology to speedup image transmission over low bandwidth lines. The solution includes complete packages for archiving, data manipulation, image diagnosis, printing, reporting, study sharing and image / report distribution between users inside or outside the hospital.

MiReport | Medical Reporting Application

Medical Reporting Software Reporting Tool Dedicated to medical reporting with three different reporting methods, template based reporting, structured based reporting and precompiled based reporting (SR Dicom). This tool can be added to any product and can stand alone.

MiPublisher | Medical Disc Publisher

is a complete medical CD/DVD publishing Solution for any imaging department in a hospital or scan center that helps increasing Return on Investment ROI due to reduction of film printing and switching to CD and DVD instead. The solution is designed to be transparent with minimal user interactions using touch screen monitor and a dicom store server to receive studies directly from the modalities or workstations and produce CD/DVD with auto CD label printing of Patient and Study Information.

MiPrint | DICOM to Paper Printing gateway

MILLENSYS Dicom Print Server "MiPrint " is a module that converts any received image from any modality with only dicom print option enabled to dicom image file, thus enabling storing it to PACS, archive it on CD/DVD , print it to any windows A4 and A3 printers.

MILLENSYS PACS Solution (MiPACS)

PACS System Cost effective and scalable Picture Archiving and Communication System for archiving medical images, patient data and reports. MILLENSYS PACS is based on Vision Tools family of products.

Vision Tools MultiView | PACS workstation

The Vision Tools MultiView system is a complete digital station that can handle up to four different machines at the same time. Very cost effective in that one MultiView station can be a complete medical imaging network by itself. It also supports medical monitors.

Teleradiology Solution

powerful web based teleradiology solution as well as cloud based , it is a complete solution for the daily teleradiology business that facilitate remote diagnosis and reporting from anywhere and from any device (e.g. PC, Mac, Tablet, iPad, ..etc) , image acquisition from hospitals, transfer of images to the teleradiology service provider , distributing images to radiologists , diagnosis and reporting, then routing back reports to the hospitals and finally the billing system that manages billing to hospitals and radiologists as well.

Different Modality Acquisition and Processing Workstations as follows

Vision Tools RadView | For Radiography CR/ DR Machines

Vision Tools Radview is a very powerful and scalable acquisition and viewing station for CR/DR machines. Vision Tools Radview is provided with the Visual Filming feature which let the user make an impressive looking film in just few seconds.

Vision Tools Opera Pro | For X-ray and Angiography Machines

OperaPro station can convert the non-dicom C-ARM and X-ray into a dicom one providing huge amount of functions and facilities for image information, archiving and processing. The OperaPro system can do online and offline DSA "Digital Subtraction Angiography" and Road Mapping. The study can be archived on a DICOM 3.0 CD-R media with just one button click.

Vision Tools CTview | For Computed Tomography "CT" Modalities

Ideal workstation for CT machines to acquire, view and process CT images and report. Vision Tools CTview system can print CT images direct to any DICOM printer. This is a major effective function of CTview that any non-dicom CT machine could print CT films on newer dicom printers [wet/dry] or 3M Protocol legacy imagers.

Vision Tools MRview | For MRI Modalities

Ideal workstation for MRI machines to acquire, view and process MRI images and report whether it's DICOM or Non-Dicom. Print images directly to any dicom printer [wet/dry] or 3M Protocol legacy imagers.

Vision Tools CathView | For Vascular CathLab Modalities

Powerful and complete digital cine processing station that can do digital image and cine loop acquisition directly from the CathLab machine (whether it is an analog or a digital one), cine playback, frame forwarding, rewinding, pausing, all this using an infrared remote control unit [wireless]. All patient study can be archived on a DICOM 3.0 CD-R media with just one button click.

Vision Tools 3Dview | Advanced Visualization 3D application.

3D volume reconstruction for Ultrasound, CT, MRI images. Added on any of the vision tools workstations to provide 3D volume render and provide functions for adjustment and processing in 3D. Recently Virtual Endoscopy feature has been added.

Vision Tools SonoPro | For Color Doppler and Echo Ultrasound machines

Designed to be very powerful for acquiring [more than 250,000 images], viewing and processing color US images and complete Cine loops. Superior quality multi format color image printing on glossy papers [up to 16 images per page]. Reporting tool to view and edit patient reports with automatic reporting tool.

Vision Tools Endo | For Endoscopy, laparoscopy, arthroscopy, ..., Machines

It is a powerful system to acquire, view and process Endoscopy images and long cine loops. Write patient report in automatic way. Superior quality image printing on glossy papers [up to 24 images per page]. Archiving patients on CD-R.

Vision Tools GView | For NM Machines

Acquire, view and process NM images and patient reports. Print color NM images with superior quality on glossy papers.

MiViewer | MILLENSYS DICOM Viewer

MILLENSYS Dicom Viewer "M88iewer" is a very easy to use general dicom viewer software to view multi-modality images and cine-loops using the same software. MiViewer can load images from any media storage to view a dicom study with all the tools needed from case navigation to image viewing.

For Commercial Sector
